The following is an examiner's statement of reasons for allowance: the prior art fails to teach as whole monitoring performance of a global network comprising a poller that further accumulating utilization information from the SNMP attribute data, accumulating utilization information occurring in a read-only manner from the device being monitored; the poller further accumulating utilization information indicative of availability of a service on the monitored device; a notifier analyzing time-based performance criteria for providing alerts to a user when received SNMP-attribute data meets one or more established threshold criteria for the monitored device; a database for storing received SNMP-attribute data; and a graphical user interface to the received SNMP-attribute data stored in the database, wherein the graphical user interface selectively identifies performance and availability of services provided by monitored devices.

Furthermore, the prior art fails to teach the step of retrieving network gateway information, the network gateway information indicative of the computing device under test and operative to enable connectivity via the network gateway to the computing device under test and being monitored by the test; and accumulating circuit utilization metrics via the retrieved network gateway information, the circuit utilization metrics having utilization information of the service, such that accumulating utilization information occurs in a read-only manner from the device being monitored, accumulating further comprising: iteratively testing, using the defined tests, utilization of the network circuits corresponding to the services; selectively identifying availability of
